# MAX JAX™

The Max Jax™ is the ultimate solution for handling large-diameter pipe applications, supporting pipes up to an impressive 36" / 900 mm in diameter. Engineered for strength and adaptability, its robust V-head is designed to accommodate a variety of attachment options, offering enhanced versatility for different job requirements. Alternatively to the V-head, the Max Jax™ can also be fitted with the Beam Jax™ head (max width. 24" / 609 mm) ideal for beams and even for pipes. Whether used for standard support or customized operations, the Max Jax™ delivers reliable performance in demanding environments.

This powerful system is built on a sturdy 5 leg Max Jax™ base, which ensures exceptional stability and strength. For added mobility, the jack can be equipped with caster wheels, allowing operators to move large pipe sections with greater ease and precision - ideal for applications that require both heavy-duty support and flexibility.

What truly sets the Max Jax™ apart is its reinforced construction. Featuring increased steel dimensions throughout the frame - including a 1.75" ACME-threaded adjustment rod - this jack is purpose-built to withstand extreme loads, making it the toughest and most durable option available in its class.
